WHY RECOMMEND UV PRO?

- Protects against harmful blue light regardless of the chosen anti-reflective treatment
- Despite being transparent, the lens offers 100% UV protection
- Eliminates eye fatigue

INVISIBLE PROTECTION FOR YOUR EYES

Blue light, part of the visible light spectrum, is divided into blue-violet and blue-turquoise light.

Blue-turquoise light enhances memory and alertness functions, aids in the body's circadian rhythm by secreting melatonin, which helps us sleep better and recover more easily.

WHAT IS UV PRO?

UV+ is the built-in protection within the lens material.

Just as the cornea, although invisible, protects the eye, UV+ provides 100% protection against UV rays.

Despite blocking harmful UV light, it does not change color.

RECOMMED UV PRO WITH:

Satin Premium lens treatment applied for easier lens maintenance

The negative effects of blue-violet light include headaches, sleep disturbances, cataracts, macular degeneration, etc.
